PROFILE

Supply chain student who builds the software a 90-person culinary department runs on. I taught myself full-stack development with AI coding tools and shipped production systems for labor reporting, cost forecasting, scheduling and food-cost analysis. Seeking a **2027 internship in France** in supply chain analytics, operations technology or applied AI.

EDUCATION

Brigham Young University–Hawaii · B.S. Supply Chain Management, minor in Information Technology Expected Dec 2027
GPA 3.9/4.0. Coursework: operations management, systems analysis, business finance, Tableau analytics, applied statistics, Cisco networking, cybersecurity, AWS cloud.
Certifications: AWS Academy Graduate – Cloud Foundations · DataCamp Data Analyst in Tableau · LinkedIn Learning Excel and Canva

EXPERIENCE

Polynesian Cultural Center (PCC), Culinary Department · Laie, Hawaii Nov 2024 – Present
Head of Operations Intelligence, reporting to the Culinary Director. Promoted within six months.

- Built and run the **Culinary Command Center**, the department's internal web platform (**640+ commits**, ~70k lines of TypeScript on React and Firebase). It replaced spreadsheets, paper forms and emailed PDFs across 3 venues.
- Helped plan how to eliminate a hidden food-cost variance after an AI-assisted scan found costing errors on **198 of 203 recipe-card ingredients** (a 3.5% net gap hiding a 28% line-level variance); explained it to managers, the Culinary Director and R&D.
- Automated the **weekly labor report**. Every Monday it merges guest counts (Power BI) and timesheets (UKG) for ~6,500 guests and ~1,650 labor hours, checks the data and emails labor cost per guest against target to leadership.
- Built a seasonal **labor-cost forecast back-tested at 4.5% mean error**. A headcount-based method I designed cut the payroll estimate gap from −29% to +4.7%.
- Built an Excel/VBA + Python **auto-scheduler** that raised shift coverage from **31.7% to ~75%** (maximum possible 76.1%) across 77 positions and ~51 student workers, within the 19-hour weekly limit.
- Automated the daily **KPI scorecard** (31 measurables) and live guest counts (every 5 minutes, on 4 screens) by parsing PDF reports, with alerts when formats change or data goes stale. Synced 93 staff profiles from Google Sheets and secured 17 permission roles.

Founder, NathanWORKS (freelance web & automation studio) · remote Mar 2026 – Present

- Built and shipped client systems: a fleet and booking console for a car-rental company in Iligan City, Philippines (prevents double bookings, syncs to Google Sheets). Also a self-editable photographer's website, a wedding RSVP site and a restaurant SaaS template with point of sale, kitchen display, inventory and invoicing.

Full-time Volunteer Missionary · Port Vila, Vanuatu & Quezon City, Philippines Feb 2020 – Apr 2022

- Managed inventory and delivery routes for ~100 missionaries with a spreadsheet order-tracking system. Led ~120 training workshops and learned Bislama.

Online Researcher, Smart Apartment Data (remote, Texas) Aug 2022 – Nov 2023

- Updated apartment market data through ~100 calls a day with property managers. Helped train new hires.

Also: Videographer / Editor, AKIRA (remote) · Culinary Assistant, Beloy's Catering 2022 – 2024

PROJECTS

- **Local AI assistants** (Node.js, Python, Ollama, Whisper). A tool-using agent that switches between the Claude API and a local Qwen3 8B model, and an offline voice assistant with a custom-trained wake word.
- **Satellite remote sensing** (Python, PyTorch, Google Earth Engine). A Sentinel-2 pipeline with SAM segmentation and 7 Earth Engine scripts mapping seagrass, water and wildfire at Philippine coastal sites.
- **Taste Polynesia digital menu** (React, WebCodecs, Gemini). Annotated “exploded view” dish videos, plus a browser video editor for staff. A photo-to-3D pipeline (ComfyUI, TRELLIS.2) produced 10 web-ready 3D dish models in a pilot.
- **Network intrusion detection lab** (Suricata 8). ~51,000 detection rules plus my own rules and PowerShell tooling.

SKILLS & LANGUAGES

Supply chain & ops	Demand and labor forecasting, workforce scheduling, food-cost and variance analysis, inventory and distribution, KPI scorecards (EOS), process mapping, Excel (VBA), Tableau, Power BI
Software	TypeScript, React, Next.js, Node.js, Python, VBA, Google Apps Script, Git/GitHub, Vitest, Playwright, AI-assisted development (Claude Code, Codex)
Cloud, data & AI	Firebase, Google Cloud, AWS (EC2, security groups), Cisco networking, Suricata, Gemini and Claude APIs, Ollama, PyTorch, Google Earth Engine
Creative	DaVinci Resolve, Premiere Pro, After Effects, Remotion, Blender (Python scripting)
Languages	English (fluent), Tagalog, Cebuano, Surigaonon, Bislama
